Tools Required

- 13mm Spanner

Assembly Instructions

1 Position one sideframe (1) on its side to make it easier to fit the support bars (2). Start by attaching the top two bars by lining up the ends of the bars with the holes in the sideframe, placing a washer (4) on the other side and bolting with an M8*25 Set Screw (3). The top two bars need to be placed on the two inside holes, as shown in Fig.2.

Fig.3

Fig.4

2 Insert the bottom two bars using the same method as step 1, only this time make sure the bars are positioned on the outer two holes, as shown in Fig.3. Placing these bars different distances apart will enable the storage unit to hold various ball sizes. Repeat this process on the other sideframe, then fit the middle four bars in the same manor. The middle bars can be positioned to personal preference or to suit certain ball types. As you can see from Fig.4, as a suggestion, the middle bars are offset to allow for easier access to balls stored in the middle section.

3 Place rubber caps (5) onto the bottom of each leg. This will prevent the storage unit from scratching or damaging sports hall floors.

IMPORTANT PLEASE READ THE ASSEMBLY INSTRUCTIONS CAREFULLY BEFORE STARTING TO ASSEMBLE YOUR STORAGE UNIT
