Product: Folding Wheel Away Hockey Posts

## Assembly Instructions

**1 : Fit the crossbar to the uprights** - Lay the crossbar on the ground and position the uprights so that the sideframes are folded in to expose the fixing holes as shown in fig 2. Insert the crossbar into uprights and secure with the washer and bolts, and screw eyelets into place.

**2 : Fit the backboard** - Stand the goal upright, fold open the sideframes, The backboard slots down between the sideboard and back of the sideframe (as shown in fig 3) and is held in place with a bracket at each end that hooks over a plate in the sideframe.

## Assembly Instructions

**Before Fitting the Net** - Make sure two or more people stretch the Net out into shape as much as possible. Due to the stiffness of the material, it may seem to be too tight. By stretching the Net into it's Box shape will allow easier assembly.

### 3 : **Fitting the net** (supplied separately)

Remove the net retaining rods from the crossbar and uprights by removing the nut from the end and sliding the rods out of the eyebolts. (Note: crossbar retaining bolts are within the fittings pack).

Position the net over the top of the sideframes and fit to the crossbar by threading the net retaining rods through the net and crossbar plates and secure with the nut. Repeat this for the uprights (a step ladder may be required).

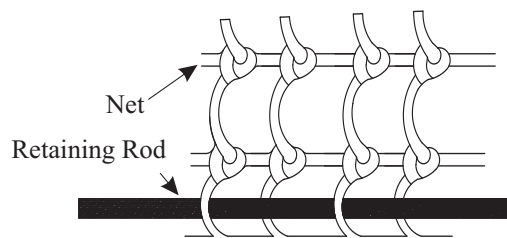

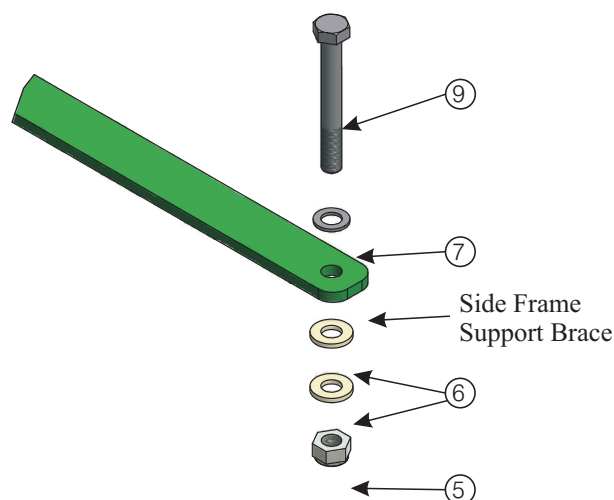

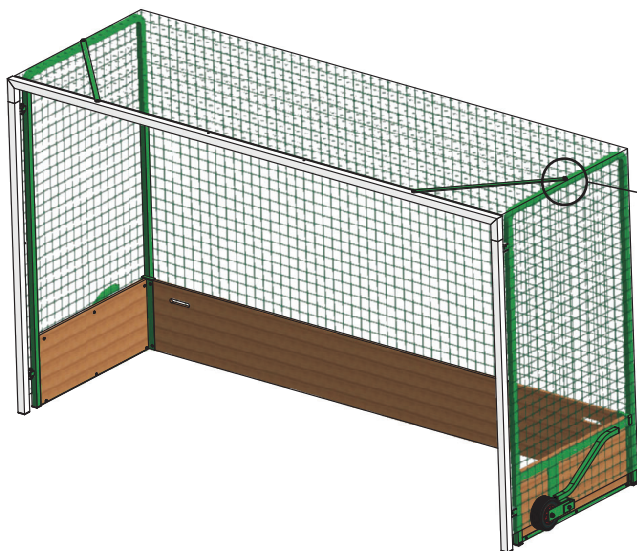

Fig 5

**4** : Identify the parts using the pack contents and fig 1. Using a small set of step ladders/platform assemble the side frame using the parts listed above, then secure in the location hole on the crossbar.

**5 : Moving the goal** (3 adults are required to move the goal). - In order to move the goal first remove the backboard. Fold one sideframe in towards the goal by removing the brace from the crossbar lug then fold the sideframe. Insert the brace into the other lug on the crossbar to secure the sideframe in the folded position. Repeat for the other sideframe ensuring that the goal is being supported at all times. Lift the goal up onto the wheels by rotating the wheel arm as shown in fig 6. Hook the net up with the net clip to stop it from trailing on the ground when the goal is being moved.
